The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of complementary strand of a polynucleotides which comprises one of complementary strand of a polynucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a si-end sequence. Complementary to the comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03654 to AAH13628 and AAH95331 represent human amino acid sequences; and AAH13629 to AAH13632 or FPARESENT oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary confidence of the 5602 nucleotide sequences defined in the specification, where the colligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end complementary to the complementary strand of a polynucleotide which comprises a 5 end combination of complementary strand of a polynucleotide which comprises a 5 end combination of complementary strand of a polynucleotide which comprises a 5 end sequence, where the oligonucleotide which comprises a 1 least 15 nucleotides and the combination of complementary of comprises at least 15 nucleotides and the combination of composition. The primer sets can be used in antisense therapy and composition and the sequence of the specification. The primer sets can be used in antisense therapy and composition of the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are useful for synthesising polynucleotides, and composition of the full-length composition of the proteins encoded by the full-length composition of the proteins encoded by the full-length composition of the protein of the full-length to the full-length composition of the full-length compo

R. Sitel: Drail! (CACTGTG)

R. Sitel: Drail! (CACTGTG)

R. Site2: Drail! (CACTGTG)

Bescription: lst strand cDNA was primed with an oligo(dT) primer [ATGTGGCTTTTTTTTTTTTTT]; double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by pcR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.5kb. The Sfil digested PCR product was cloned into distinct Drail! sites of pMELBS-FL3. Xho! sites just outside the Drail! sites can be used to isolate the cDNA insert. Libraries were constructed by singano et al. (University of Tokyo, Institute of Medical Science). Custom primer used for sequencing (5' and primer [CTACTGCTCTAAAAGCTGCG]; seduencing (5' and primer [CTACTGCTCTAAAAGCTGCG]).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /product hypothetical protein"

Clone from S. Wiemann; Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
Sequenced by AGOWA (Berlin/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKFZp586D211) is available at the RZPD in Berlin.
                                                                                            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14 Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further information about the clone and the sequencing project is availat http://www.mips.biochem.mpg.de/proj/cDNA/.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The library is from

Bm: EMMI: Sw: SWISSPROT Tr: TEEMAH: WP: WORNPEP: Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projets/Celegans/commpore This sequence was generated from part of betafallaledone conties of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/MOP/Chr6
RP1-166F13 is from the library RPC1-3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For Inther Park Cancer Institute by the group of Pieter de Jong. For Inther Purcons, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human DNA sequence from clone RP3-366F13 on chromosome 6 Contains ESTs, STSs, GSSs and a CpC island, Contains the OPRMI gene encoding opioid receptor mu 1, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence has been rinished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu), where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IMPORTANT: This sequence is not the entire insert of clone RRP3-366F13 It may be shorter because we sequence overlapping sections only once, except Lor a 100 base overlap. The true right and of clone RP3-366F13 is at 96110 in this sequence. The true right and of clone RP3-366F13 is at 96110 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Euteleostomi;
                                            sequence is ambiquous, there is an annotation using the 'unsure'
